

MEON Pain Relief Cream

Listed by Therapeutic Goods Administration (TGA) Australia as a Medicine AUST L 264492

MEON's superior Patented Natural Active Ingredient

Proven **More than Eight Times the Pain Relief efficacy** of:

- **Aspirin** is a unique Non-Steroidal Anti-Inflammatory Drug (Nonsteroidal anti-inflammatory drugs (NSAIDs) are a drug class that reduce pain, decrease fever, prevent blood clots and, in higher doses, decrease inflammation.

Proven **More Than Twice Pain Relief the Efficacy** of:

- **Ibuprofen** - Has the lowest risk of causing GI bleeding. However, this advantage is lost at high doses. Ibuprofen produces balanced inhibitory effects on both COX-1 and COX-2. It is available in multiple formulations and combination products.
- **Naproxen** - Provides effective relief in acute traumatic injury and for acute pain associated with migraine, tension headache, postoperative pain, postpartum pain, pain consequent to various gynaecologic procedures, and the pain of dysmenorrhea. Naproxen has a lowest risk of provoking heart attack. It may cause photosensitivity.
- **Celebrex** - Has a sulphonamide structure and is contraindicated for patients with known sulphur allergy. Currently, celecoxib is the only available NSAID marketed as a selective COX-2 inhibitor. It is less likely than traditional NSAIDs to cause adverse gastrointestinal effects.

MEON Biologically Enhanced Emu Lipids are produced by a unique patented process which biologically modifies emu fat enhancing the natural pain relief and anti-inflammatory properties prior to rendering to produce MEON Emu Oil. The superior efficacy compared to NSAID's used for treatment of inflammation and pain, specifically arthritic pain can clearly be seen in results compared to commonly used NSAID's.

MEON oil having more than twice the efficacy of NSAID's in the study is clearly demonstrated. Efficacy that could be considered at least equal to or greater than prescription only pain relief/anti-inflammatory drugs without the variety of negative side effects associated with so many pain relief/anti-inflammatory drugs. Products based on MEON Emu Oil are OTC products that do not require prescription.

Credibility

MEON Pain Relief Cream was developed in Australia based on over 20 years of research into why certain naturally occurring traditional oil remedies for pain relief varied so greatly in their efficacy from batch to batch. The research involved **M**acadamia oil, **E**mu oil, **O**strich oil and **N**eem seed oil, the acronym of which is represented in the trade name MEON. MEON Laboratories Pty. Ltd. was formed in 2011 to commence commercialisation of the discovery.

A lot of work has been carried out over the years with the assistance of university professors and general practitioners in both structured and ad hoc evaluations.

We know MEON Pain relief cream is possibly the fastest acting highest efficacy product for reducing pain and inflammation in the world today. This statement is backed up both anecdotal evidence and by empirical data involving in-vivo testing with rats, the results of which are reproduced here:
